

## ***It's ewe time! Western Australian Program***

**Robust Sheep – it's the new ewe** will explore maternal genetics and latest findings about the value of carcass traits to positively influence wool, reproduction and fitness characteristics

**Wean more lambs** will give practical ways to increase the number of lambs weaned per hectare and give examples of how producers have done it.

**Turning Pasture into Product** will discuss strategic management of pastures & grazing including the key issues of soil fertility, grazing management and effect of composition.

**Profitable Finishing Systems** will lead you through the issues of Production and confinement feeding systems with a focus on the use of lick feeders and experiences of producers in dry seasons.

**The Right lamb** will explore consumer needs, what can be done on-farm to underpin excellent eating quality and the why and how of becoming a Meat Standards Australia accredited lamb supplier.

**Easy sheep management** will explore the sheep system and the management system and identify how you can do less work for more profit– fitting sheep into what you do better.

**Skintraction® Update** will report on the latest results from intra-dermal injection trials from AWI as a mulesing replacement.

**Lice & flies update** will present the best chemical application advice for managing lice and flies and explore the issues around lice chemical breakdowns.

**The sheep's back** The market outlook is strong and it's time to rebuild but what balance of enterprise is offering the best returns and how does cropping compare and complement?
