

APPROVED MANNER OF PREPARATION FOR MOVEMENT FROM THE TOMATO POTATO PSYLLID QUARANTINE AREA

The following is an approved manner for the preparation for movement from the Quarantine Area of solanaceous or convolvulaceous fruit/vegetables:

Fumigation with methyl bromide for two hours at one of the following rates:

Flesh Temperature (°C)	Methyl Bromide (g/m³)
21 - 31.9	32
16 - 20.9	40
11 - 15.9	48
10 - 10.9	56

Under the Quarantine Area Notice for tomato potato psyllid, this preparation must take place no more than 60 hours before movement, and be evidenced by records which include details of treatment, transporters and consignees.
