

## Challenge 3 – Remote Sheep Monitoring

Sheep farmers are responsible for ensuring the welfare of their flock. However, the size of farms and other constraints, such as availability of staff, presents challenges to physically monitoring the sheep at all times.

**Your challenge is to identify effective and practical methods for remote monitoring of sheep. This could include monitoring to ensure sheep have access to adequate feed, water and shelter in the paddock; or monitoring for predators (such as foxes or wild dogs) during the time of year when lambs are born.**
