Environmental Weed Risk Assessment results for Desmodium uncinatum (Jacq.) DC.

Assessors Name/s: Rod Randall

Invasiveness Score: 6.67
Impacts Score: 5.00

Climate Score
Kimberley: 1
Pilbara: 2
Gascoyne: 1
Southwest: 0.5

Final FFI Score
Kimberley: 33.33
Pilbara: 66.67
Gascoyne: 33.33
Southwest: 16.67

Environmental Weed Risk Rating
Kimberley: Low
Pilbara: Medium
Gascoyne: Low
Southwest: Negligible

Common Name/s: desmodium silverleaf

Maps: Current Australian distribution [above left], predicted preferred climate [above right] and global distribution [bottom].

Maps: For more details on the CRC Future Farm Industries system see:

Weed Risk
Very High: Use not supported, significant environmental risks
High: Use not recommended, any spread to be reported and controlled
Medium: Can be used, monitor, manage and report any offsite movement
Low: Can be used with minimal concern
Negligible: Can be used without concern
