Triticonazole + cypermethrin <sup>^</sup>	100 mL*	100 mL*	-	-	-	-	-	-	100 mL	-	-	• Premis <sup>®</sup> Protect • Titan <sup>®</sup> • Premis Pro C <sup>®</sup> • Real <sup>®</sup> 200C* • Caesar <sup>®</sup> *
Applied as a fertiliser treatment (rate/ha)	Flutriafol (250 g/L)	-	-	200 - 400 mL	-	200 - 400 mL	-	-	-	-	-	• Impact <sup>®</sup> • Jubilee <sup>®</sup> • Flutriafol 250 SC • Intake <sup>®</sup> Combi • Tricam <sup>®</sup> • Pollux <sup>®</sup> • Bayonet <sup>®</sup> • Furrowfol <sup>®</sup> 250 • Flufo <sup>®</sup>
	Flutriafol (500 g/L)	-	-	100 or 200 mL	-	100 or 200 mL	-	-	-	-	-	• Impact <sup>®</sup> Endure • Flutriafol 500 SC
	Triadimefon	-	-	-	-	200 g <sup>v</sup>	-	-	-	-	-	• 4 Farmers Triadimefon 500 WP or 500 dry <sup>v</sup>

**Note:** 1). A blank cell (-) indicates that product is not registered for use in the disease specified; 2). <sup>®</sup> registered trademark; 3). \*disease suppression only. 4). \*For use on barley, fluquinconazole must be used in conjunction with tebuconazole as per the registered label. 5). <sup>##</sup> Armour<sup>®</sup> C, Pinnacle<sup>®</sup> 100<sup>##</sup>, V-Flow<sup>##</sup> and Arrow<sup>®</sup> C<sup>##</sup> are the only flutriafol treatments registered for scald and powdery mildew in barley; but they are **not** registered for use in oats and triticale 6). <sup>v</sup>4Farmers Triadimefon 500 WP/dry is the only triadimefon product registered to control barley powdery mildew. 7). <sup>♦</sup> Real<sup>®</sup> 200C and Caesar<sup>®</sup> are **not** registered for use on oats. These products are the only triticonazole products registered for suppression of barley scald and powdery mildew. 8). Currently there are no fungicide seed dressing products registered to control barley leaf rust; 9). *Fluquinconazole* base products at higher rate suppress Take-all disease.

**New Products for 2014:**

- 1). Rancona<sup>®</sup> Dimension<sup>®</sup> for smut and Pythium control and suppression of Rhizoctonia.
- 2). Hombre<sup>®</sup> Ultra for smut control and reduce aphid feeding damage.

**Insecticides:**

- 1). <sup>^</sup>Cypermethrin and triflumuron compounds (insecticides) are effective against insect pests of stored grain.
- 2). <sup>^</sup>Hombre<sup>®</sup> Ultra (@ 200 mL/100kg seed), Proguard<sup>®</sup> Plus, Zorro<sup>®</sup>, Proleaf<sup>®</sup> Plus and Foliarflo<sup>®</sup> Plus are also registered for aphid control and the prevention of the spread of "barley yellow dwarf virus" (BYDV) in cereals crops.
- 3). Emerge<sup>™</sup> and Guardian<sup>®</sup> (imidacloprid as active constituent) has been registered as flowable seed treatment in control of insects including aphids that transmit BYDV.
- 4). Cruiser<sup>®</sup> Opti Insecticide which contains lambda-cyhalothrin with thiamethoxam for control of aphids that transmit BYDV, red-legged earth mite and lucerne flea.

**Caution about barley loose smut and powdery mildew control in 2014:**

- 1). Substantial amounts of loose smut were observed in barley varieties such as Hindmarsh in 2013 season in the south coast. To prevent further build-up of the disease in 2014, it is worth treating the barley seed with products containing *Penflufen*, *Difenoconazole + Metalaxyl-M + Sedaxane*, *Fluquinconazole + Tebuconazole* which were shown to be very effective in 2013 DAFWA studies.
- 2). In powdery mildew prone areas, especially southern region of WA, barley seed should be only treated with *Fluquinconazole* based products together with suitable smuticide.
