Use MyPestGuide™ Reporter and website to record aphid sightings and locations of any suspect Russian wheat aphid (RWA). It is very important to make a report with photos, even if no aphids or symptoms are observed, as this absence data is valuable information for market access queries. To assist with RWA surveillance, please follow these two steps:

**1. Survey plant**

- **Whole crop damage and plants nearby**

  Look for changes in green colouration across the crop.

- **Close-up of pest and damage symptoms**

  Look for stunted plant growth, loss of vigour, discoloration patterns with white, yellow, purple or red streaking, leaf curling and the presence/absence of aphids.

**2. Report and map it**

Use MyPestGuide™ Reporter to photograph and map the location of aphids and damage symptoms, or go online mypestguide.agric.wa.gov.au to create a report.

Using the MyPestGuide™ Reporter app:

- Download app and open it on your mobile device.
- Create a report by selecting the ‘+’ symbol.
  - Tap the camera icon to start adding photos.
  - Turn on ‘location’.
  - Select ‘Russian wheat aphid survey’ from the picklist.
  - Add property address. Record no damage or damage, any aphids.
    - Do nothing
    - Do nothing
  - Tick ‘I agree to share my report’.
  - Click ‘Continue’.
    - Select your State.
    - Enter your contact details.
  - Click ‘Send’!

Any reports you make using the app will be stored within the app for reference along with our response. Remember to ‘refresh reports’ if creating them outside WiFi range when you return.
