

Initially the NLIS Sheep & Goats program used visually-readable ear tags and paper records to identify livestock and trace mob-based movements. RFID tags are also used now to identify livestock and record movements on the NLIS database so that animals can be traced individually.

The NLIS Sheep & Goats standards for visual and RFID tags detail minimum mandatory specifications for accredited devices supplied to producers. Devices may be a one-piece or two-piece tag. The visual tag standard recommends that breeder tags be supplied according to the colour of the year system. The colours rotate in 8-year cycles.

Originally, RFID breeder tags for sheep were yellow and post-breeder tags pink. The standard now allows the colour of year system for RFID tags.

Figure 1: Colour of year system

Year	Tag colour	Year	Tag colour
2008	Black	2016	Black
2009	White	2017	White
2010	Orange	2018	Orange
2011	Light green	2019	Light green
2012	Purple	2020	Purple
2013	Yellow	2021	Yellow
2014	Red	2022	Red
2015	Sky blue	2023	Sky blue

Any year	Post-breeder tags must be pink
----------	--------------------------------

Accreditation status

Devices that perform well after six months of a field trial may be granted **conditional accreditation**. This allows the product to be sold as an NLIS device. Devices that still perform well at 12, 24 and 36 month intervals are usually granted **full accreditation** after three years.

Full accreditation status

These tags have full NLIS accreditation status. The examples shown here are mainly breeder tags. Any pink tags are post-breeder tags – these are applied to sheep or goats no longer on their property of birth, or to introduced animals that have lost their original tag.

Note: See Page 6 for manufacturers' contact details.
